OEM Equipment and products from Microsoft, Intel, ATI, and a few more major OEM firms are now protected by Vista's superior Authentic™ Logo. You can use Authentic™ Logo to watermark your Office programs and create digital signatures for your files, e-mail messages and any other Microsoft Office documents and files. Whether the logo is watermarked on your disk or printed on a paper you can still easily find out who made a copy of the document or your software. Simply select the document or file and click on the Authentic™ Logo icon. An entry will be shown where you can see the document vendor and exact time and date the document was made. You can also Watermark other file types like movies, MS Office documents and any other third party file types. Watermarking your files will protect your intellectual property from unauthorized and illegal use. SMCA KZ IconXTractor Review: Pros: Easy to use. Nifty Image Extractor. Cons: No skins yet. Not sure why they chose a free tool... xhtml.tcl builds html pages from tcl scripts using the xhtml command-line option. Although xhtml can also process other document formats,.xml and.ps documents are not supported. xhtml.tcl was originally developed by the GNU project. It is Free Software, released under the GNU General Public License. xhtml.tcl supports Lua extensions, and is easy to use in scripts that are using the Lua bindings. xhtml.tcl is a complementary tool to CGI in that it is a pre-processor that handles the data and the output. It does not handle the semantics of the output code, so it cannot generate valid xhtml. (Native) Sample configurations Apache Apache::Handler is a module that allows CGI scripts to be invoked by the Apache web server. It provides CGI features such as GET and POST data, and cookies. Apache::Handler does not require you to recompile Apache to use; it is installed as a standard CGI module. CGI::Application is a flexible application server for servers written in Tcl or any Tk based language. Using the backend and frontend modules, you can develop applications without the need for an IDE, shell, compiler or syntax checking program. Image::Guide is an image processing program with an image editor, data conversion, color correction, edge enhancement, file compression, b7e8fdf5c8
